Answer:

Explanation:

Explanation

Box 1: StandardScaler

The StandardScaler assumes your data is normally distributed within each feature and will scale them such that the distribution is now centred around 0, with a standard deviation of 1.

Example:

All features are now on the same scale relative to one another.

Box 2: Min Max Scaler

Notice that the skewness of the distribution is maintained but the 3 distributions are brought into the same scale so that they overlap.

Box 3: Normalizer

E. VPCì•~ è°• ì„æè, €è„•ì-ì„æ ì-"è"æ í•¬ì•, íš, ì-• è€€í•æ ENI ìf•ì„±

Answer: B,D

Explanation:

Amazon DynamoDB and Amazon S3 support gateway endpoints, not interface endpoints. With a gateway endpoint you create the

endpoint in the VPC, attach a policy allowing access to the service, and then specify the route table to create a route table entry in.

CORRECT: "Create a route table entry for the endpoint" is a correct answer.

CORRECT: "Create a gateway endpoint for DynamoDB" is also a correct answer.

INCORRECT: "Create a new DynamoDB table that uses the endpoint" is incorrect as it is not necessary to create a new DynamoDB table.

INCORRECT: "Create an ENI for the endpoint in each of the subnets of the VPC" is incorrect as an ENI is used by an interface endpoint, not a gateway endpoint.

INCORRECT: "Create a VPC peering connection between the VPC and DynamoDB" is incorrect as you cannot create a VPC peering connection between a VPC and a public AWS service as public services are outside of VPCs.
