NEW QUESTION: 1

At which layer of the OSI model does the protocol that provides the information that is displayed by the show cdp neighbors command operate?

- A. network
- B. data link
- C. transport
- D. application
- E. physical

Answer: B

Explanation:

<http://computernetworkingnotes.com/cisco-devices-administration-and-configuration/ciscodiscoveryprotocol.html> CDP is a device discovery protocol that runs over Layer 2 (the data link layer)

on all Cisco-manufactured devices (routers, bridges, access servers, and switches) and allows network management applications to discover Cisco devices that are neighbors of already known devices. With CDP, network management applications can learn the device type and the Simple Network Management Protocol (SNMP) agent address of neighboring devices running lower-layer, transparent protocols. CDP allows devices to share basic configuration information without even configuring any protocol specific information and is enabled by default on all interfaces. CDP is a Datalink Protocol occurring at Layer 2 of the OSI model. CDP is not routable and can only go over to directly connected devices. CDP is enabled, by default, on all Cisco devices. CDP updates are generated as multicasts every 60 seconds with a hold-down period of 180 seconds for a missing neighbor. The `no cdp run` command globally disables CDP, while the `no cdp enable` command disables CDP on an interface. Use `show cdp neighbors` to list out your directly connected Cisco neighboring devices. Adding the `detail` parameter will display the layer-3 addressing configured on the neighbor.

NEW QUESTION: 3

DRAG DROP

Answer:

Explanation:

Discovery Management: Administrators or users who are members of the Discovery Management role group can perform searches of mailboxes in the Exchange organization for data that meets specific criteria and can also configure litigation holds on mailboxes.

Records Management: Users who are members of the Records Management role group can configure compliance features, such as retention policy tags, message classifications, transport rules, and more.

Recipient Management: Administrators who are members of the Recipient Management role group have administrative access to create or modify Exchange 2013 recipients within the Exchange 2013 organization.

Help Desk: Users who are members of the Help Desk role group can perform limited recipient management of Exchange 2013 recipients. The Help Desk role group, by default, enables members to view and modify the Outlook Web App options of any user in the organization.

These options might include modifying the user's display name, address, phone number, and so on. They don't include options that aren't available in Outlook Web App options, such as modifying the size of a mailbox or configuring the mailbox database on which a mailbox is located.

Organization Management: Administrators who are members of the Organization Management role group have administrative access to the entire Exchange 2013 organization and can perform almost any task against any Exchange 2013 object, with some exceptions. Of the groups listed, the Organization Management group is the only that can create and manage security groups.
