Answer: C

NEW QUESTION: 2

You have an Exchange Server 2010 organization. The organization contains a Mailbox server named Server1. Server1 hosts two mailbox database and one public folder database.

You need to recommend a high availability solution for Server 1 that meets the following requirements:

-Mailboxes and public folders must be available if a single Mailbox server fails

-Deploy the minimum number of servers

What should you recommend?

A. Create and configure a database availability group (DAG). Add Server1 and Server2 to the DAG. Create database copies. Replicate all public folders to Server2.

B. Install failover Clustering on both servers, and then configure a single copy cluster (SCC). Deploy a new server named Server3. Configure Server3 as a dedicated public folder server.

C. Create and configure a database availability group (DAG). Add Server1 and Server2 to the DAG. Deploy a new server named Server3. Create database copies. Configure Server3 as a dedicated public folder server.

D. Install failover clustering on both servers, and then configure cluster continuous replication. Replicate all public folders to Server2.

Answer: A

Explanation:

This question really only talks about one server so I am not sure where server 2 enters the picture. In order to have to a high availability you will need a second server - which in that case B is the correct answer.

NEW QUESTION: 3

Which of the following is the greatest threat posed by backups?

A. A backup is the source of Malware or illicit information.

B. An un-encrypted backup can be misplaced or stolen.

C. A backup is unavailable during disaster recovery.

D. A backup is incomplete because no verification was performed.

Answer: A
