Our CEO has the proven-track of success in the HCNP-Security.

**NEW QUESTION: 1**

Ziehen Sie die Beschreibungen von links auf die richtigen Konfigurationsverwaltungstechnologien rechts.

**Answer:**

Explanation:

Explanation

The focus of Ansible is to be streamlined and fast, and to require no node agent installation. Thus, Ansible performs all functions over SSH. Ansible is built on Python, in contrast to the Ruby foundation of Puppet and Chef. TCP port 10002 is the command port. It may be configured in the Chef Push Jobs configuration file. This port allows Chef Push Jobs clients to communicate with the Chef Push Jobs server. Puppet is an open-source configuration management solution, which is built with Ruby and offers custom Domain Specific Language (DSL) and Embedded Ruby (ERB) templates to create custom Puppet language files, offering a declarative-paradigm programming approach. A Puppet piece of code is called a manifest, and is a file with .pp extension.

**NEW QUESTION: 2**

Which API method is used to check the status of an asynchronous operation executed via the DRM web service?

- A. getOperationStates
- B. checkStatus
- C. getJobStatus
- D. getJobInfo
- E. checkJobStatus

**Answer: E**

**NEW QUESTION: 3**

Which API method is used to check the status of an asynchronous operation executed via the DRM web service?

Which API method is used to check the status of an asynchronous operation executed via the DRM web service?

Which API method is used to check the status of an asynchronous operation executed via the DRM web service?

**Answer:**

Explanation:

Explanation

Box 1: No

Session Persistence is None.

Box 2: Yes

Web requests uses the HTTP protocol, not the TCP protocol.

Box 3: No

Note: Azure Load Balancer provides health probes for use with load-balancing rules. Health probe configuration and probe responses determine which backend pool instances will receive new flows. You can use health probes to detect the failure of an application on a backend instance. You can also generate a custom response to a health probe and use the health probe for flow control to manage load or planned downtime.

When a health probe fails, Load Balancer stops sending new flows to the respective unhealthy instance.

**NEW QUESTION: 4**

A Cisco MPLS TE tunnel user RSVP to reserve bandwidth along a path by signaling across the network. At which point in the signaling process does the Cisco MPLS TE tunnel interface move to the UP state?

- A. when the RSVP RESV message reaches the headend router
- B. when the RSVP PATH message reaches the headend router
- C. when the RSVP PATH message reaches the tailend router
- D. when the RSVP RESV message reaches the tailend router

**Answer: A**

Explanation:

Explanation

RSVP-TE rides over IP (Protocol 46) and consists of following main messages:

PATH: Sent by the Headend router requesting the resources and is forwarded through the network from Headend towards the Tail end router.

RESV: Sent by the Tail end router in response to the PATH message received confirming the resource reservation and travels from Tail end towards the Headend router.
