ã¿...è|•ã•€ã•,ã,Šã•¾ã•™ã•<i¼ÿ

- A. Option A
- B. Option C
- C. Option B
- D. Option D

Answer: D

Explanation:

When implementing a custom membership provider, you are required to inherit the MembershipProvider abstract class. There are two primary reasons for creating a custom membership provider.

You need to store membership information in a data source that is not supported by the membership providers included with the .NET Framework, such as a FoxPro database, an Oracle database, or other data source.

You need to manage membership information using a database schema that is different from the database schema used by the providers that ship with the .NET Framework. A common example of this would be membership data that already exists in a SQL Server database for a company or Web site.
