NEW QUESTION: 1

Which two statements about the function of the stub feature in EIGRP are true? (Choose two.)

- A.** It stops the hub router from sending queries to the stub router.
- B.** It stops the stub router from sending queries to peers.
- C.** It stops the hub router from propagating dynamically learned EIGRP prefixes to the stub routers.
- D.** It stops the stub router from propagating dynamically learned EIGRP prefixes to the hub routers.

Answer: A,D

Explanation:

When using the EIGRP Stub Routing feature, you need to configure the distribution and remote routers to use EIGRP, and to configure only the remote router as a stub. Only specified routes are propagated from the remote (stub) router. The router responds to queries for summaries, connected routes, redistributed static routes, external routes, and internal routes with the message "inaccessible." A router that is

configured as a stub will send a special peer information packet to all neighboring routers to report its status as a stub router.

Without the stub feature, even after the routes that are sent from the distribution router to the remote router have been filtered or summarized, a problem might occur. If a route is lost somewhere in the corporate network, EIGRP could send a query to the distribution router, which in turn will send a query to the remote router even if routes are being summarized. If there is a problem communicating over the WAN link between the distribution router and the remote router, an EIGRP stuck in active (SIA) condition could occur and cause instability elsewhere in the network. The EIGRP Stub Routing feature allows a network administrator to prevent queries from being sent to the remote router.

NEW QUESTION: 2

An organization has outsourced many application development activities to a third party that uses contract programmers extensively. Which of the following would provide the BEST assurance that the third party's contract programmers comply with the organization's security policies?

- A.** Perform periodic security assessments of the contractors' activities.
- B.** Include penalties for noncompliance in the contracting agreement.
- C.** Require annual signed agreements of adherence to security policies.
- D.** Conduct periodic vulnerability scans of the application.

Answer: A

NEW QUESTION: 3

A 128-bit Wired Equivalent Privacy (WEP) is a shared key authentication system that means the client machine and Access Point share the same key. Which vulnerability is inherent with this type of security scheme?

- A.** A static WEP key can be compromised if a hacker can gather enough transmitted packet information.
- B.** The open architecture of the WEP security scheme leaves it vulnerable to hackers.
- C.** The WEP security model is open to impersonation type hacking, by replication of MAC addresses, usernames, and passwords.
- D.** Any WEP enabled device transmitting OTA unencrypted makes the WLAN vulnerable.
