NEW QUESTION: 3

You have a Microsoft Azure Active Directory (Azure AD) tenant that contains the users shown in the following table.

You enable self-service password reset for all users. You set Number of methods required to reset to 1, and you set Methods available to users to Security questions only.

What information must be configured for each user before the user can perform a self-service password reset? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Microsoft enforces a strong default two-gate password reset policy for any Azure administrator role. This policy may be different from the one you have defined for your users and cannot be changed. You should always test password reset functionality as a user without any Azure administrator roles assigned.

With a two-gate policy, administrators don't have the ability to use security questions.

The two-gate policy requires two pieces of authentication data, such as an email address, authenticator app, or a phone number. User3 is not assigned to an Administrative role so the configured method of Security questions only applies to User3. Reference:
