NEW QUESTION: 1

Refer to the exhibit. The WLC administrator sees that the controller to which a roaming client associates has Mobility Role Anchor configured under Clients > Detail. Which type of roaming is supported?

- A. Layer 3 intercontroller
- B. Intercontroller
- C. Indirect
- D. Layer 2 intercontroller

Answer: A

Explanation:

If the clients roam between APs registered to different controllers and the client WLAN on the two controllers is on different subnet, then it is called inter-controller L3 roam. In this situation as well controllers exchange mobility messages. Client database entry change is completely different that to L2 roam (instead of move, it will copy). In this situation the original controller marks the client entry as "Anchor" where as new controller marks the client entry as "Foreign". The two controllers now referred to as "Anchor controller" & "Foreign Controller" respectively. Client will keep the original IP address & that is the real advantage.

Note: Inter-Controller (normally layer 2) roaming occurs when a client roam between two APs registered to two different controllers, where each controller has an interface in the client subnet.

NEW QUESTION: 2

You support a customer whose Microsoft Lync Server 2013 Enterprise environment that is configured with Enterprise Voice and Dial-in Conferencing. You remove the server that is hosting the File Store by using the Lync Topology Builder.

You add and define a new file server and publish the topology. Conference attendees report that they no longer hear their names played when they join or leave a conference. You need to ensure that conference attendees hear their names played when they join or leave a conference. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Restart the Conferencing Announcement application.
- B. Restart the Conferencing Attendant application.
- C. Run the Set-CsDialinConferencingConfiguration cmdlet.
- D. Run the Test-CsDialInConferencing cmdlet.

Answer: A,B

Explanation:

If you change the path for the File Store in Topology Builder after you deploy Lync Server 2013, you need to restart the Conferencing Attendant and Conferencing Announcement applications to use the new path.

NEW QUESTION: 3

Linux™, AWS, S3, EBS, Glacier, EFS, Amazon, Microsoft, Lync, Server, 2013, Enterprise, Voice, Conferencing, File Store, Topology Builder, Set-CsDialinConferencingConfiguration, Test-CsDialInConferencing, Restart, Conferencing Announcement, Conferencing Attendant.

- A. Amazon EBS
- B. Amazon S3
- C. Amazon Glacier
- D. Amazon EFS

Answer: D

Explanation:

Explanation

Amazon Elastic File System (Amazon EFS) provides a simple, scalable, fully managed elastic NFS file system for use with AWS Cloud services and on-premises resources. It is built to scale on demand to petabytes without disrupting applications, growing and shrinking automatically as you add and remove files, eliminating the need to provision and manage capacity to accommodate growth.

Amazon EFS is designed to provide the throughput, IOPS, and low latency needed for Linux workloads. Throughput and IOPS scale as a file system grows and can burst to higher throughput levels for short periods of time to support the unpredictable performance needs of file workloads. For the most demanding workloads, Amazon EFS can support performance over 10 GB/sec and up to 500,000 IOPS.
