### **NEW QUESTION: 3**

Which statement describes the significance of the CHANGE FAILURE command in RMAN? (Choose all that apply.)

- A. It is used to execute the advised repair script.
- B. It is used to explicitly close the open failures.
- C. It is used to change failure priority only for HIGH or LOW priorities.
- D. It is used to inform the database about the repair after the repair script executes.
- E. It is used to change failure priority only for the CRITICAL priority.

**Answer: B,C**

### **NEW QUESTION: 4**

Your company has one main office and 10 branch offices. You plan to deploy Active Directory.

You need to recommend a solution to recover Active Directory domain objects in the event of data loss. The solution must ensure that you can recover individually deleted user accounts. What should you recommend?

- A. Install multiple domain controllers.
- B. Schedule regular backups of the SYSVOL folder on the existing domain controller.
- C. Schedule regular system state backups by using Windows Server Backup.
- D. Install a server that runs Windows Server 2008 that has Active Directory Lightweight Directory Services (AD LDS).

**Answer: C**

Explanation:

Active Directory is backed up as part of system state, a collection of system components that depend on each other. You must back up and restore system state components together.
