NEW QUESTION: 1

Which of the following is a feature of HPE OneSphere?

- A. HPE OneSphere
- B. HPE OneView
- C. HPE InfoSight
- D. HPE OneView

Answer: C

NEW QUESTION: 2

A home user is configuring a wireless router and must decide which wireless standard to use. The user has many devices that require a lot of bandwidth and must be able to communicate at a far distance from the router. Which of the following wireless standards will BEST meet the home user's requirements?

- A. 802.11g
- B. 802.11b
- C. 802.11n
- D. 802.11a

Answer: C

NEW QUESTION: 3

Answer:

Explanation:

Explanation

Box 1: Every three days at 10.00

anchorDateTime defines the absolute position in time used by the scheduler to compute dataset slice boundaries.

"frequency": "<Specifies the time unit for data slice production. Supported frequency: Minute, Hour, Day, Week, Month>",

"interval": "<Specifies the interval within the defined frequency. For example, frequency set to 'Hour' and interval set to 1 indicates that new data slices should be produced hourly>"

Box 2: Every minute up to three times.

retryInterval is the wait time between a failure and the next attempt. This setting applies to present time. If the previous try failed, the next try is after the retryInterval period.

Example: 00:01:00 (1 minute)

Example: If it is 1:00 PM right now, we begin the first try. If the duration to complete the first validation check is 1 minute and the operation failed, the next retry is at 1:00 + 1min (duration) + 1min (retry interval) = 1:02 PM.

For slices in the past, there is no delay. The retry happens immediately.

retryTimeout is the timeout for each retry attempt.

maximumRetry is the number of times to check for the availability of the external data.
