### **NEW QUESTION: 3**

Refer to the exhibits.

Exhibit 1

Exhibit 2

Network administrators use the Aruba Mobility Master (MM) wizard to create a WLAN and so do not manually alter any of the profiles for that WLAN. The exhibits show some of the settings for the WLAN.

Some wireless users cannot successfully connect to the WLAN. Network administrators attempt to connect on their own machines with a test account, and the connection is successful. They attempt to connect the same account on user clients, and the connection fails.

- A.** Some access points (APs) are not configured as clients on the RADIUS server, so user clients connected to them cannot

authenticate.

**B.** The user clients have unauthorized MAC addresses, so the RADIUS server rejects the authentication even though the username and password are correct.

**C.** The RADIUS server has reached the maximum number of RADIUS clients that it can support, so it rejects new wireless clients.

**D.** The user clients do not trust the RADIUS server certificate and are configured not to prompt users to trust new certificates.

**Answer: D**
