#### **NEW QUESTION: 1**

Assuming default settings, which best describes the order of data provided to a reducer's reduce method:

- A.** Both the keys and values passed to a reducer always appear in sorted order.
- B.** The keys given to a reducer are in sorted order but the values associated with each key are in no predictable order

C. The keys given to a reducer aren't in a predictable order, but the values associated with those keys always are.

D. Neither keys nor values are in any predictable order.

**Answer: B**

**NEW QUESTION: 2**

While checking a controller event log, you notice that the parse file is not up to date. How can you update the parse file on the controller?

A. Upgrade the firmware using the firmware superfile.

B. Update the WEBES rule set on the Management Station.

C. Add parse file descriptors with the SSSU editor.

D. Copy a description file to the Command View EVA binary folder on the Management Station.

**Answer: A**

**NEW QUESTION: 3**

You have an Ethernet frame with an unknown destination address. Which steps are required for the switch to process and forward the Ethernet frame?

A. 1. The frame enters the ingress port and PFE.

2.The ingress PFE performs the MAC address lookup; the destination MAC belongs to the switch so the PFE performs a L3 lookup.

3.The egress PFE forwards the packet out the egress port toward the destination.

B. 1. The frame enters the ingress port and Packet Forwarding Engine (PFE).

2.The ingress PFE performs the MAC address lookup, determines the egress PFE and port.

3.The ingress PFE forwards the frame to the egress PFE.

4.The egress PFE forwards the frame out the egress port towards the destination.

C. 1. The frame enters the ingress port and PFE.

2.The ingress PFE performs the MAC address lookup and determines the source MAC is unknown.

3.The ingress PFE sends the header information to the RE, where the MAC is added.

4.If the RE adds a new source MAC address to the bridge table, the newly added MAC entry is sent to all PFEs.

D. 1. The frame enters the ingress port and PFE.

2.The ingress PFE performs the MAC address lookup, determines no match and replicates the frame to other PFEs and local ports on same broadcast domain.

3.All other PFEs replicate the frame and forward those frames out all egress ports in the same broadcast domain.

**Answer: D**

**NEW QUESTION: 4**

Your current VPN-1 NG with Application Intelligence (AI) R55 stand-alone VPN-1 Pro Gateway and SmartCenter Server runs on SecurePlatform.

You plan to implement VPN-1 NGX R65 in a distributed environment, where the new machine will be the SmartCenter Server, and the existing machine will be the VPN-1 Pro Gateway only.

You need to migrate the NG with AI R55 SmartCenter Server configuration, including licensing.

How do you handle licensing for this NGX R65 upgrade?

**A.** Request an NGX R65 SmartCenter Server license, using the new server's IP address. Request a new central NGX R65 VPN-1 Gateway license for the existing gateway server's IP address.

**B.** Request an NGX R65 SmartCenter Server license, using the existing gateway machine's IP address.

Request a new local license for the NGX R65 VPN-1 Gateway using the new server's IP address.

**C.** Request an NGX R65 SmartCenter Server license, using the new server's IP address. Request a new central NGX R65 VPN-1 Gateway license also licensed to the new SmartCenter Server's IP address.

**D.** Leave the current license on the gateway to be upgraded during the software upgrade. Purchase a new license for the VPN-1 NGX R65 SmartCenter Server.

**Answer: C**
