Many people like this simple method, It contains the latest JN0-103 questions and answers, This free demo is a small part of the official complete Juniper JN0-103 training dumps.

JN0-103 Soft test engine can stimulate the real exam environment, so that you can know the procedure for the exam, and your confidence for the exam will also be strengthened.

We promise that in case of their failure, we will return all dumps money back to users, JN0-103 actual test not only are high-quality products, but also provided you with a high-quality service team.

### **NEW QUESTION: 1**

Your network contains a server named Server1 that runs Windows Server 2008 R2. You have a user named User1.

You need to ensure that User1 can view the events in the Security event log. The solution must minimize the number of rights assigned to User1.

What should you do?

- A.** In Event viewer, filter the Security log.
- B.** In the Local Security Policy console, modify the Security Options.
- C.** In the Registry Editor, add a Security Descriptor Definition Language (SDDL) value.
- D.** In Event viewer, configure the properties of the Security log.

**Answer: C**

Explanation:

Microsoft Windows uses SDDL to develop and administer object security. SDDL defines security descriptors, which are text strings or binary data structures containing security information for one or more objects, e.g., file, folder, service or unnamed process. Security descriptors use access control lists (ACLs) to manage access and control entries and audits. Each security descriptor contains a discretionary access control list (DACL) and system access control list (SACL).

The DACL controls access to an object, and the SACL controls logging of access attempts.

In addition to the object owner name, most SDDL security descriptor strings are comprised of five parts.

These include DACL, SACL, group and header, which specifies inheritance level and permission.

### **NEW QUESTION: 2**

You have a server named Server1 that runs Windows Server 2016. Server1 is a Hyper-V host.

You run the commands shown in the following graphic:

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

**Answer:**

Explanation:

### **NEW QUESTION: 3**

Sie stellen eine Active Directory-Verbunddienste (AD FS) 2.1-Infrastruktur bereit. Die Infrastruktur verwendet Active Directory als Attributspeicher.

Einige Benutzer geben an, dass sie sich nicht bei der AD FS-Infrastruktur authentifizieren können.

Sie stellen fest, dass nur Benutzer, die Webbrowser von Drittanbietern ausführen, Probleme haben.

Sie müssen sicherstellen, dass sich alle Benutzer erfolgreich bei der AD FS-Infrastruktur authentifizieren können.

Welchen Windows PowerShell-Befehl sollten Sie ausführen?

- A. Set-ADFSProperties -ProxyTrustTokenLifetime 1:00:00
- B. Set-ADFSProperties -ExtendedProtectionTokenCheck None
- C. Set-ADFSProperties -SSOLifetime 1:00:00
- D. Set-ADFSProperties -AddProxyAuthenticationRules Keine

**Answer: B**

Explanation:
