**NEW QUESTION: 2**

A user is trying to retrieve objects from a SharePoint server and finds the request is taking an excessive amount of time. An administrator tries to isolate the issue and notes the following:

\*

Application performance is poor when compared to virtual machines on other hosts.

\*

Performance improves when the virtual machine is moved to another host.

\*

The virtual machine encounters higher than expected CPU %Ready times.

What conclusion can be reached regarding the performance issues for this virtual machine?

**A.** The Path Selection Policy for the storage device is set differently on the affected host.

**B.** Host Power Management is directly impacting virtual machine performance.

**C.** The virtual machine has a large number of snapshots.

**D.** Network I/O control is configured for the portgroup.

**Answer: B**

**NEW QUESTION: 3**

**A.** Option B

**B.** Option A

**C.** Option D

**D.** Option C

**Answer: A**

Explanation:

Partitions represent a collection of entities with the same PartitionKey values. Partitions are always served from one partition server and each partition server can serve one or more partitions. A partition server has a rate limit of the number of entities it can serve from one partition over time.
