Plug-ins for App1.exe must be installed by using the App-V 5.0 Service Pack 3 (SP3) client.

Users must be able to launch App2 by double-clicking files that have the .app2 extension.

The App-V packages must be published to each user, not globally.

The disk space used by the App-V packages must be minimized.

App1.exe must be able to interact with App-V-based plug-ins.

#### Configuration Manager Requirements

Relecloud identifies the following requirements for Configuration Manager:

The status of each client must be summarized daily.

App4 must be replaced by an application named App5.

App4 and App5 cannot co-exist on the same computer.

The usage of the App6 executables must be monitored.

Any software configured to auto-start on the client computers must be reported.

The laptops of the marketing department users must not be reported as inactive.

Updates from a new third-party vendor named Vendor1 must be deployed. Vendor1 provides updates

in the form of .cab files.

## **NEW QUESTION: 2**

You are developing an application that uses many small images. When the images load, the application runs slowly.

You need to improve the performance of the application.

What should you do?

- A. Combine all the images into a single image and use CSS to create sprites.
- B. Host all images on a Microsoft Azure web role with multiple

instances.

**C.** Preload all the images when the application starts to ensure that the images are cached.

**D.** Convert the images to ICO file format and stream all images on a single connection.

**Answer: A**

Explanation:

Because browsers limit how many concurrent HTTP requests they make to a website, a web page with many small icon images can result in a longer load time. You can combine many small images into a single larger image - a CSS sprite - using the free ASP.NET Sprite and Image Optimization Library available from Microsoft.
