RODC Post-Installation Configuration

If you install DNS server after the AD DS installation, you must also enlist the RODC in the DNS application directory partitions. The RODC is not enlisted automatically in the DNS application directory partitions by design because it is a privileged operation. If the RODC were allowed to enlist itself, it would have permissions to add or remove other DNS servers that are enlisted in the application directory partitions.

To enlist a DNS server in a DNS application directory partition

1. Open an elevated command prompt.

2. At the command prompt, type the following command, and then press ENTER:

```
dnscmd<ServerName> /EnlistDirectoryPartition <FQDN>
```

For example, to enlist RODC01 in the domain-wide DNS

application directory partition in a

domain named child.contoso.com, type the following command:

```
dnscmd RODC01 /EnlistDirectoryPartition
```

```
DomainDNSZones.child.contoso.com
```
