Microsoft Dynamics AX 2012, Lean Manufacturing: Production flows and activities, White Paper, April 2011, p 13.

NEW QUESTION: 2

DRAG DROP

Your network contains an Active Directory domain named contoso.com. The domain contains a domain controller named DC1. You need to create an Active Directory snapshot on DC1. Which four commands should you run?

To answer, move the four appropriate commands from the list of commands to the answer area and arrange them in the correct order.

Select and Place:

Answer:

Explanation:

Explanation/Reference:

Explanation:

Box 1: ntdsutil

Box 2: snapshot

Box 3: activate instance ntds

Box 4: create

Note:

Create a snapshot of AD DS in Windows Server 2012 R2 by using NTDSUTIL

1 - On the domain server, open command prompt and type ntdsutil and press enter...

2 - Next, type snapshot and press enter...

3 - Next, type activate instance ntds and press Enter...

4 - Next, type create (this create command is to generate a snapshot of my AD) and press Enter...

NEW QUESTION: 3

You are designing the security for a mission critical Azure SQL database named DB1. DB1 contains several columns that store Personally Identifiable Information (PII) data You need to

recommend a security solution that meets the following requirements:

- * Ensures that DB1 is encrypted at rest
 - * Ensures that data from the columns containing PII data is encrypted in transit
- Which security solution should you recommend for DB1 and the columns? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

DB1: Transparent Data Encryption

Azure SQL Database currently supports encryption at rest for Microsoft-managed service side and client-side encryption scenarios.

Support for server encryption is currently provided through the SQL feature called Transparent Data Encryption.

Columns: Always encrypted

Always Encrypted is a feature designed to protect sensitive data stored in Azure SQL Database or SQL Server databases. Always Encrypted allows clients to encrypt sensitive data inside client applications and never reveal the encryption keys to the database engine (SQL Database or SQL Server).

Note: Most data breaches involve the theft of critical data such as credit card numbers or personally identifiable information. Databases can be treasure troves of sensitive information. They can contain customers' personal data (like national identification numbers), confidential competitive information, and intellectual property. Lost or stolen data, especially customer data, can result in brand damage, competitive disadvantage, and serious fines--even lawsuits.
