NEW QUESTION: 1

Refer to the exhibit.

If the route to 10.1.1.1 is removed from the R2 routing table, which server becomes the master NTP server?

- A. the NTP server at 10.4.4.4
- B. R2
- C. the NTP server at 10.3.3.3
- D. the NTP server with the lowest stratum number

Answer: D

Explanation:

Explanation/Reference:

Explanation:

NTP uses a concept called "stratum" that defines how many NTP hops away a device is from an authoritative time source. For example, a device with stratum 1 is a very accurate device and might have an atomic clock attached to it. Another NTP server that is using this stratum 1 server to sync its own time would be a stratum 2 device because it's one NTP hop further away from the source. When you configure multiple NTP servers, the client will prefer the NTP server with the lowest stratum value.
