Allowing HTTPS Access for ASDM

To use ASDM, you need to enable the HTTPS server, and allow HTTPS connections to the security appliance.

All of these tasks are completed if you use the `setup` command. This section describes how to manually configure ASDM access.

The security appliance allows a maximum of 5 concurrent ASDM instances per context, if available, with a maximum of 32 ASDM instances between all contexts.

Note WebVPN and ASDM administration cannot be enabled on the same interface. If you enable WebVPN on an interface, then that interface cannot be used for ASDM.

To configure ASDM access, follow these steps:

Step 1 To identify the IP addresses from which the security appliance accepts HTTPS connections, enter the following command for each address or subnet:

```
hostname(config)# http source_IP_address mask source_interface
```

Step 2 To enable the HTTPS server, enter the following command:

```
hostname(config)# http server enable
```
