A company wants to ensure that all credentials for various systems are saved within a central database so that users only have to login once for access to all systems. Which of the following would accomplish this?

- A. Same Sign-On
- B. Single Sign-On
- C. Multi-factor authentication
- D. Smart card access

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Single sign-on means that once a user (or other subject) is authenticated into a realm, re-authentication is not required for access to resources on any realm entity. Single sign-on is able to internally translate and store credentials for the various mechanisms, from the credential used for original authentication.
