#### **NEW QUESTION: 1**

A wool sock, a toilet seat, Oriental silk -- out of a millennium of mud comes proof that the globe-traveling Vikings weren't the ravaging rovers historians made them to be.

"The old English image of the Vikings as simply blood-thirsty bands of pillagers vanished with these finds," says Richard Hall, an archaeologist.

"We dug down and found a cocoon of water-logging, a time

capsule of everyday life," said Hall, who led a tour Wednesday through a muddy concrete hall fashioned out of the hole left from the excavation.

Hall was one of some 400 people who, for five years, dug up the leftovers of the lives of an estimated 30,000 Vikings. Workers discovered the sophisticated settlement when a central district of York was leveled for rebuilding. Starting April 14, 1984, electric cars will carry tourists through a tunnel of time that goes back to 866 A.D., when the Vikings came to York, 188 miles northwest of London. Archaeologists are eager to display what they found in a \$3.9 million reconstruction of Jorvik, the Anglo-Saxon name for the settlement.

"We have skeletons, 15,000 objects, a quarter-of-a-million pieces of pottery, some of the best reserved Viking-age buildings ever discovered and five tons of animal bones," Hall said.

The digs revealed intimate details of Viking life. There is a toilet seat, keys, tools, games counters, the seeds in the blackberries they picked and a knitted woolen sock.

"They were a great trading nation with a sophisticated monetary system," Hall said.

"We will show the range of products in which they traded -- silk from the Far East, amber from the Baltic, pottery from the Rhineland, cowrie shells from the Indian Ocean." Which of the following does the author primarily use to support his view of the Vikings?

- A. analogy
- B. comparison and contrast
- C. personal experience
- D. examples

## **NEW QUESTION: 2**

You are asked to complete a 2-node installation of a FAS8060 cluster running clustered Data ONTAP 8.3. The hardware has been installed and the cluster has been configured. AutoSupport testing has not been successful because NetApp Support cannot see any messages, and the customer does not have any messages in their inbox.

Which two actions should be performed to test the functionality from the NetApp cluster? (Choose two.)

- A. Verify that the network gateway responds to a ping request.
- B. Verify that the domain controller responds to a ping request.
- C. Verify that the cluster interconnect switches respond to a ping request.
- D. Verify that the mailhost responds to a ping request.

**Answer: C,D**

Explanation:

B: Check that the mail host specified in the options is a host that the storage system can talk to, by running the following command on the storage system:

```
ping mailhost_name
```

mailhost\_name is the name of the mail host specified in the AutoSupport options.

D: If the system cannot deliver AutoSupport messages over SMTP you should confirm basic

network connectivity and DNS lookup:

Your network management LIF must be up for operational and administrative status.

You must be able to ping a functioning host on the same subnet from the cluster management LIF

(not a LIF on any of the nodes).

You must be able to ping a functioning host outside the subnet from the cluster management LIF.

You must be able to ping a functioning host outside the subnet from the cluster management LIF

using the name of the host (not the IP address).
