#### **NEW QUESTION: 1**

Selina wrote a LotusScript Web service method with the following structure:

```
Public Function lookupPersonInfo (personName As String, f As WS_FAULT) As PersonInfo '** do
the lookup, return the information in our custom PersonInfo
data type End Function
```

 What is the

- purpose of the WS\_FAULT parameter in the Function definition?
- A. It specifies that a SOAP Fault will be returned if an error occurs (otherwise, the client would expect an empty response in the case of an error)
  - B. It indicates that the incoming SOAP message should include 2 parameters: a "personName" string and an empty SOAP Fault object
  - C. It is a required parameter for any methods that do not contain error handling blocks
  - D. It allows the method to return a custom message if an error occurs in the code
- Answer: D**

**NEW QUESTION: 2**

Click the Exhibit button.

Given the configuration shown in the exhibit, which configuration object would be used to associate both Nancy and Walter with firewall user authentication within a security policy?

- A. firewall-user
  - B. ftp-users
  - C. ftp-group
  - D. nancy and walter
- Answer: C**

**NEW QUESTION: 3**

Refer to the Exhibit.

An administrator is changing the settings on a vSphere Distributed Switch (vDS). During this process, the ESXi Management IP address is set to an address which can no longer communicate with the vCenter Server.

What is the most likely outcome of this action?

- A. The host will automatically detect the communication issue and revert the change.
- B. The host will disconnect and migrate the vDS portgroup to a standard switch.
- C. The host will disconnect from the vCenter Server and remain disconnected.
- D. The host will stay connected with the change, but show an alert.

**Answer: A**

Explanation:

Explanation/Reference:

Explanation: Procedure

1.Connect to the DCUI of the host.

2.From the Network Restore Options menu, select Restore vDS.

3.Configure the uplinks and optionally the VLAN for the

management network.

4. Apply the configuration.

The DCUI creates a local ephemeral port and applies the values you provided for the VLAN and uplinks.

The DCUI moves the VMkernel adapter for the management network to the new local port to restore connectivity to vCenter Server.

Next Steps:

After the connection of the host to vCenter Server is restored, correct the configuration of the distributed port group and re-add the VMkernel adapter to the group.

For information about networking rollback, recovery, and restore, see

the vSphere Networking documentation: Wait until vCenter Server applies the settings within the next 24 hours.
