Answer: D

Explanation:

Explanation

You grant data plane access by setting Key Vault access policies for a key vault.

Note 1: Grant our VM's system-assigned managed identity access to the Key Vault.

- \* Select Access policies and click Add new.
- \* In Configure from template, select Secret Management.
- \* Choose Select Principal, and in the search field enter the name of the VM you created earlier. Select the VM in the result list and click Select.
- \* Click OK to finishing adding the new access policy, and OK to finish access policy selection.

Note 2: Access to a key vault is controlled through two interfaces: the management plane and the data plane.

The management plane is where you manage Key Vault itself. Operations in this plane include creating and deleting key vaults, retrieving Key Vault properties, and updating access policies. The data plane is where you work with the data stored in a key vault. You can add, delete, and modify keys, secrets, and certificates.

**NEW QUESTION: 3**

A system has the ability to automatically provision additional virtual servers in response to a load increase. This is an example of which of the following cloud features?

- A. Resource Pooling
- B. Orchestration
- C. Replication
- D. Virtual Network

**Answer: D**

**NEW QUESTION: 4**

Refer to the exhibit.

The switches in the exhibit use RSTP. The network administrator needs to add Link 2. Why should the administrator configure Links 1 and 2 as a link aggregation?

- A. to share traffic more evenly over both links
- B. to automatically apply the settings already configured for Link 1 to Link 2
- C. to combine traffic statistics for the interfaces
- D. to prevent a loop from occurring

**Answer: A**
