Answer: A

NEW QUESTION: 4

In order to optimize performance for a compute cluster that requires low inter-node latency, which feature in the following list should you use?

- A. VPC private subnets
- B. Multiple Availability Zones
- C. Placement Groups

D. AWS Direct Connect

E. EC2 Dedicated Instances

Answer: C

Explanation:

A placement group is a logical grouping of instances within a single Availability Zone. Using placement groups enables applications to participate in a low-latency, 10 Gigabits per second (Gbps) network. Placement groups are recommended for applications that benefit from low network latency, high network throughput, or both. To provide the lowest latency, and the highest packet-per-second network performance for your placement group, choose an instance type that supports enhanced networking.
