NEW QUESTION: 1

While analyzing logs from a WAF, a cybersecurity analyst finds the following:

```
"GET
```

/form.php?id=463225%2b%2575%256e%2569%256f%256e%2b%2573%2574%2box3133333731,1223,1224&name=&state=IL"

Which of the following BEST describes what the analyst has found?

- A. A packet is being used to bypass the WAF
- B. This is an encrypted packet
- C. This is an encrypted GET HTTP request
- D. This is an encoded WAF bypass

Answer: D

NEW QUESTION: 2

DRAG DROP

Answer:

Explanation:

NEW QUESTION: 3

- A. Option D
- B. Option A
- C. Option C
- D. Option B

Answer: A

Explanation:

A differencing disk is associated with another virtual hard disk that you select when you create the differencing disk. This means that the disk to which you want to associate the differencing disk must exist first. This virtual hard disk is called the "parent" disk and the differencing disk is the "child" disk. The parent disk can be any type of virtual hard disk. The differencing disk stores all changes that would otherwise be made to the parent disk if the differencing disk was not being used. The differencing disk provides an ongoing way to save changes without altering the parent disk. You can use the differencing disk to store changes indefinitely, as long as there is enough space on the physical disk where the differencing disk is stored. The differencing disk expands dynamically as data is written to it and can grow as large as the maximum size allocated for the parent disk when the parent disk was created.
