Explanation:

Security awareness compliance training for all employees should be implemented to educate employees about corporate policies and procedures for working with information technology (IT). Data loss prevention (DLP) should be implemented to make sure that users do not send sensitive or critical information outside the corporate network.

Incorrect Answers:

A: A URL filter will prevent users from accessing the online forum, but it will not prevent them from sharing confidential corporate information.

B: NIDS will monitor traffic to and from all devices on the network, perform an analysis of passing traffic on the entire subnet, and matches the traffic that is passed on the subnets to the library of known attacks. It will not prevent access to the online forum, or from sharing confidential corporate information.

E: The problem is that users are not adhering to the security policies and procedures, so reviewing them will not solve the problem.
