NEW QUESTION: 1

You have been asked by the customer who is implementing Oracle Sales Cloud and Oracle Customer Data Management to check the features for managing address information:

* Sales team members should use a list of values while entering states to standardize address information for territories alignment.

* Sales team members should be able to select states or other address elements from lists to ensure accuracy during entry, and the application should be capable of filling in missing values.

* Sales team members may sometimes enter only postal code. The application should be capable of retrieving the corresponding city and state values automatically.

Which statement is true about managing address information?

A. A separate license is needed for Oracle Address Verification Cloud service

B. The requirements are available by default and do not need any additional configuration.

C. Geography validation needs to be set up by using the Manage Geographies task.

D. It can be configured but needs Oracle Data as a Service to standardize addresses

Answer: D

NEW QUESTION: 2

A company has 50 servers that run Windows Server 2008 R2 Enterprise or Windows Server 2003 Enterprise. You plan to deploy a large-scale wireless network. The wireless network will include 300 wireless access points (WAPs). The WAPs will use Remote Authentication Dial-In User Service (RADIUS) to authenticate devices for network access. All passwords and shared secrets used for device authentication must be changed every 14 days.

You need to enable centralized management of the RADIUS infrastructure across the WAPs.

What should you recommend? (More than one answer choice may achieve the goal. Select the BEST answer.)

A. Deploy a Host Credential Authorization Protocol (HCAP) server and configure it as a RADIUS proxy.

B. Deploy a Network Policy Server (NPS). Create an XML file named `ias.xml` that defines access point settings. Then run the `netsh nps import filename = "ias.xml"` command.

C. Deploy a Network Policy Server (NPS) and define an NPS template. Configure the RADIUS client settings for each client based on the template.

D. Deploy a Network Policy Server (NPS) and define individual RADIUS client settings with IEEE 802.1X authentication for each WAP.

Answer: C

Explanation:

template Network Policy Server (NPS) templates allow you to create configuration elements, such as Remote Authentication Dial-In User Service (RADIUS) clients or shared secrets, that you can reuse on the local NPS server and export for use on other NPS servers.

NPS templates are designed to reduce the amount of time and cost that it takes to configure NPS on one or more servers. The following NPS template types are available for configuration in Templates Management:

Shared Secrets

RADIUS Clients

Remote RADIUS Servers

IP Filters

Health Policies

Remediation Server Groups
