Answer: A

Explanation:

Combining Wildcard Characters

The % and _ symbols can be used in any combination with literal characters. The example in the slide displays the names of all employees whose last names have the letter "o" as the second character.

ESCAPE Identifier

When you need to have an exact match for the actual % and _ characters, use the ESCAPE identifier. This option specifies what the escape character is. If you want to search for strings that contain SA_, you can use the following SQL statement:

```
SELECT employee_id, last_name, job_id
FROM employees WHERE job_id LIKE '%SA\_%' ESCAPE '\';
```

NEW QUESTION: 4

A 35-year-old client is receiving psychopharmacological treatment of his major depression with tranylcypromine sulfate (Parnate), a monoamine oxidase (MAO) inhibitor. The nurse teaches the client that while he is taking this type of antidepressant, he needs to restrict his dietary intake of:

- A. Tyramine
- B. Saturated fats
- C. Tryptophan
- D. Potassium-rich foods

Answer: A

Explanation:

(A)
The client may need to avoid some potassium-rich foods (such as bananas, raisins, etc.). However, this is not because of the potassium content of these foods. (B) Tryptophan is an essential amino acid that is present in high concentrations in animal and fish protein.

(C)
The client will need to watch his dietary intake of tyramine. Tyramine is a by-product of the conversion of tyrosine to epinephrine. Tyramine is found in a variety of foods and beverages, ranging from aged cheese to caffeine drinks. Ingestion of tyramine-rich foods while taking a MAO inhibitor may lead to an increase in blood pressure and/or a life-threatening hypertensive crisis. (D) To maintain a healthy lifestyle, restriction of dietary saturated fats is advisable.
