**NEW QUESTION: 3**

You are developing an application that includes a class named Kiosk. The Kiosk class includes a static property named Catalog. The Kiosk class is defined by the following code segment. (Line numbers are included for reference only.)

You have the following requirements:

- \* Initialize the `_catalog` field to a Catalog instance.
- \* Initialize the `_catalog` field only once.
- \* Ensure that the application code acquires a lock only when the `_catalog` object must be instantiated.

You need to meet the requirements.

Which three code segments should you insert in sequence at line 09? (To answer, move the appropriate code segments from the list of code segments to the answer area and arrange them in the correct order.)

**Answer:**

Explanation:

Explanation

After taking a lock you must check once again the `_catalog` field to be sure that other threads didn't instantiate it in the meantime.
