NEW QUESTION: 1

An Internet software application requires authentication before a user is permitted to utilize the resource. Which testing scenario BEST validates the functionality of the application?

- A. Allowed data bounds and limits testing
- B. Input validation testing
- C. Web session testing
- D. Reasonable data testing

Answer: B

NEW QUESTION: 2

A client reports that video is not streaming. The administrator determines the client is connecting at a data rate of 12 Mbps and is trying to stream to a valid multicast address on the network. What three items should the administrator check next to troubleshoot the issue? (Choose three)

- A. WLAN has been set for a QoS value of Platinum.
- B. IGMP snooping is turned off because the client cannot request to join a group, only access points can.
- C. RTSP is used to stream the video due to wireless multicast not using acknowledgements.
- D. Video-stream for the multicast video is configured in the controller.
- E. WLAN has been set for a QoS value of Gold.
- F. WLAN has been configured to allow multicast-direct to work correctly and multicast-direct has been enabled globally.

Answer: D,E,F

NEW QUESTION: 3

You plan to migrate a Microsoft SQL server instance between physical servers.

You must migrate the metadata associated with the database instance.

You need to ensure that the new instance retains the existing jobs and alerts.

Solutions: You restore the service master key.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Explanation

The Service Master Key is the root of the SQL Server encryption hierarchy. It does not handle alerts and jobs.

The msdb database is used by SQL Server Agent for scheduling alerts and jobs and by other features such as SQL Server Management Studio, Service Broker and Database Mail.
